

Counts of selected confirmed outcomes for Long Life Study (LLS) participants with a Form 301

Data as of: September, 2013

	Total (N=7,875)	Race/Ethnicity		
		White (N=3,910)	Black (N=2,651)	Hispanic (N=1,314)
CHD	313	209	74	30
CABG/PTCA	510	311	136	63
Angina*	255	140	92	23
Congestive heart failure†	83	51	25	7
Stroke	234	129	88	17
PVD	81	53	21	7
DVT/PE‡	210	151	51	8
Invasive breast cancer	426	210	149	67
Colorectal cancer	129	73	43	13
Total cancer	1,004	538	331	135
Hip fracture	183	154	14	15
Total fracture§	871	668	124	79
Self-reported diabetes (treated)	1,413	492	656	265

* Angina is not a verified outcome after the main WHI study. Reported counts represent experience during the original program.

† Congestive heart failure is not a verified outcome during the Extension 1 study. Reported counts represent experience during the original program and the Extension 2 study.

‡ DVT and PE are verified for HT trial participants only through Extension 1. During Extension 2, DVT and PE are verified for all MRC participants.

§ Total fracture includes all non-pathological adjudicated fractures. Hip fracture is adjudicated for all CT and OS participants during the original program and the extension studies. During the original program, other fractures were adjudicated at all clinics for CT participants, but only at the 3 bone density clinics for OS participants. Other fractures are not adjudicated during the extension studies.
